

Ultra White Blockout DIRECT PRINT TEXTILE

Our **Ultra White Blockout DIRECT PRINT TEXTILE** is a woven polyester fabric manufactured with three layers to ensure opacity for applications that require blackout. This media, and our entire Direct Print Textile line, is designed especially for printers who demand high performance textiles for direct printing. After imaging, this media is designed to provide outstanding color consistency, excellent image sharpness and a wide color range.

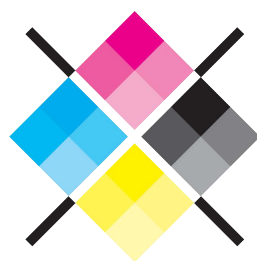

This double-sided ultra white fabric is constructed with a black blackout layer in the center for excellence in double-sided graphics. It is a related banner media to the **Ultra White Blockout** in our line of Dye Sub Performance textiles. Both fabrics have similar constructions and benefits, with different ink compatibilities. Our **Ultra White Blockout** is often used for indoor banners, display frames, theatrical displays, blackout curtains and tradeshow graphics.

Material	Polyester
Finish	Print Receptive
