

5 Reasons Converting to ONYX Thrive is Good for Business

ONYX Thrive print workflow provides the ability to expand production capacity and reduce costs with a scalable production solution based on Adobe® PDF technologies.

Eliminate processing bottlenecks that cost money

- Gain additional capacity by combining ONYX and Adobe PDF technology
- Be ready to print faster by processing multiple files simultaneously for a single device and RIP up to 3X faster
- Separate production tasks to better utilize production staff with flexible network licensing

Improve profitability by eliminating misprints

- Get consistent results with one print workflow solution for all your devices while using the same technology from design to print
- Reduce the risk of customer rejections with accurate pre-production previews and proofing capabilities
- See how changing settings will affect printed output with live updates to previews

Increase your overall production capacity

- One production software to run your shop across all of your large format applications
- Achieve consistency across multiple device with ONYX Quick Sets
- Build different workflows to meet specific production needs

Ensure customer deadlines are met

- See real time production information and status via web browser
- Eliminate prepress production tasks with automation
- Connect trusted software applications across the shop

Recover immediately if your production hardware fails

- Build your production systems with redundant configurations that eliminate downtime when hardware fails
- Easily modify the production flow for job submission and processing
- Hot Backup option can restore full network licensing for 30 days
